

Temperature Sensor

OVERVIEW:

The Dragino D20/D20S/D22/D23 is a **Temperature Sensor** for Internet of Things solution. It will convert the Temperature reading to upload the sensor data send to IoT platform via **LoRaWAN, NB-IoT or CAT-M1** network.

The temperature sensor measure $-55^{\circ}\text{C} \sim 125^{\circ}\text{C}$ with accuracy $\pm 0.5^{\circ}\text{C}$ (max $\pm 2.0^{\circ}\text{C}$).

The temperature sensor supports **temperature alarm feature**, user can set temperature alarm for instant notice. It supports **Datalog feature**, can save the data when there is no network and uplink when network recover.

It supports **BLE configure and wireless OTA update** which make user easy to use.

The Temperature Sensor is powered by **8500mAh Li-SOCI2 battery** or **solar panel with li-on battery**, it is designed for long-term use up to several years.

Application:

HVAC

Pipeline Liquid

Warehouse Monitor

Chemical Storage
